

Reference

Salim

- A reference is just another name for the same variable

Example :

```
Int main()
```

```
{
```

```
Int a = 10;
```

```
Int &r = a;    - syntax of reference
```

```
Count << a;
```

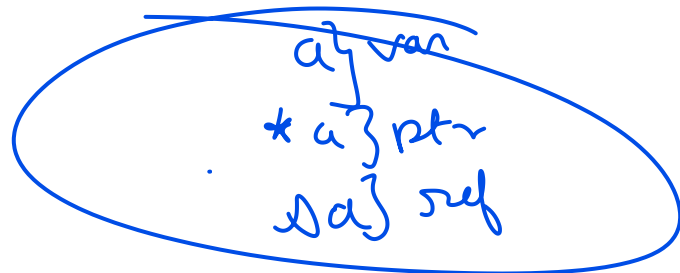

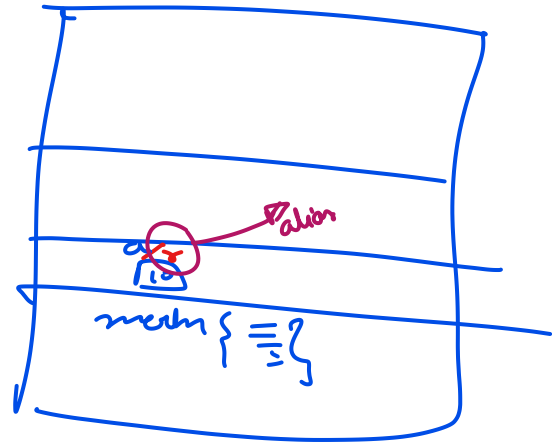

```
r++;
```

```
Cout << r;
```

```
Cout << a;
```

```
}
```

** Reference must be initialised
during its declaration*

- This is use for parameter passing
- For writing small functions we use reference
